

Attributes necessary for data synchronization of Perishable Commodities

Trading partners must exchange "master data" relating to their companies and their products that will be procured in order to effectively facilitate efficient trade (i.e. efficient ordering, delivery and settlement). The Grocery retail community in Canada has defined the data attributes necessary to support this process; more commonly termed "Data Synchronization". This workbook describes those attributes necessary to effectively load ECCnet, Canada's Product & Party Data Catalogue.

The majority of suppliers of perishable products will only need to define their assortment at **case level only**. If you are a supplier that is currently using the PEIB (Produce Electronic Identification Board), PLU (Price Look Up) or URMIS (Uniform Retail Meat Identification Standards) system to identify products at the item (i.e. consumer) level, continue to do so! You will however, need to identify your products at the case level. Each case must be uniquely identified with a valid EAN-UCC Global Trade Item Number (GTIN). The GTIN is often referred to as the **U.P.C code or Case Code (SCC14) if marking at the item or case level**. Please refer to the column labeled "Case Only" on the appropriate page * and your commodity.

If you are a supplier that is already identifying product **using an EAN-UCC GTIN** code, then in addition to case information you will need to provide information about each item. Please refer to the column labeled "Case & Item" on the appropriate page * and your commodity.

- 1 This PDF document has been created for you to review the attribute requirements by the Perishable Commodity.
- 2 Pages 2 - 3 provide attribute definitions. These are available for reference when reviewing **your commodity ***.
- 3 Each commodity has its own unique data synchronization attribute requirements.

Please review your commodity *

- 4 Verify your specific commodity to know what you are required to load to ECCnet.
- 4a When product is only available at Case Only (no item, no pallet) populate column labelled **Case ONLY**
- 4b When product is available at Case and Item populate column labelled **Case & Item**

NOTE: The following legend for:

M = Mandatory meaning - This field is part of the subset and must be loaded to ECCnet Catalog

O = Optional meaning - This field is part of the subset and if available may be loaded to ECCnet Catalog

na = Not applicable meaning - it is not used in the scenario.

* The pages pertaining to your commodity attributes are as follows:

- Page 4 - Bakery
- Page 5 - Bulk
- Page 6 - Dairy
- Page 7 - Deli
- Page 8 - Floral
- Page 9 - Meat
- Page 10 - Produce
- Page 11 - Seafood

ECCnet - Perishable Attributes		ECCnet - Perishable Attribute Definition	Packaging Level
Definition Case: Where a unique EAN-UCC GTIN exists at a Case/Carton level.			Case
Definition Item: Where a unique EAN-UCC GTIN exists at the item level.			Item
1	Selection Code	Definition – The Selection Code is a 3-digit code, generated by Vendors, used to logically group products at a high level. This allows vendors to structure their catalogue according to their own internal requirements. While mandatory, if not supplied defaults to 000 = All Products. For further information on structuring catalogues see the ECCnet Data Loading Guidelines.	Case Transaction
2	Selection Description	Definition – This field is used to describe the Selection Code.	
3	SCC14 (or UPC if UPC Marked)	GTIN (Global Trade Item Number) Definition – Identifies the UPC/SCC14 or EAN number of the product. The GTIN must include the check-digit and must have the correct length for the specified type of GTIN. GTIN's should be numerically unique within a Vendor's catalogue. For DSD items which have a zero suppressed UPC (a U.P.C.-8 Consumer Unit Code), define the GTIN with the UPC-8. The system will automatically calculate the corresponding UPC-12 and will provide both values to the Retailer/Distributor. (SCC - Shipping Container Code)	Case
4	Change Date	Definition – DATE OF CHANGE as defined by the Trade Item Identification and Communication Guidelines (The effective date the item was added to the vendor's catalogue or a change was made to any of the descriptive fields by the vendor). The date when the item was added or one or more of its attributes was changed. When an Add or Change is made through the web screens the current date will be used. With EDI this date may be an application/systems processing date. While it could also be a future date ECCnet does not suggest this use. This date must NOT be used to communicate Price or Terms effective dates. If not provided it will default to the current date	Case & Item
5	First Ship Date	Definition – The date the item is available for shipping. If not specified the item is immediately available for shipping.	Case & Item
6	First Order Date	Definition – The date the item is available for ordering. If not specified the item is immediately available for ordering.	Case & Item
7	Cancel Date	Definition – The date an item was cancelled as defined by the Trade Item Identification and Communication Guidelines.	Case & Item
8	Discontinue Date	Definition – The "Last Order Date" when the item is no longer available for order. When entered online all GTIN's in the Item # / Style # will be updated. The Discontinue Date should not be specified until the discontinue date is known.	Case & Item
9	Reinstatement Date	Definition – The date when a previously discontinued item is reinstated and again available for ordering. When entered online all GTIN's in the Item # / Style # will be updated.	Case & Item
10	Minimum Order Quantity	Definition – UPC CATALOG MINIMUM QUANTITY – Manufacturer imposed minimum order for the item. If specified must be an integer value greater than zero. Please refer to the Trade Item Identification and Communication Guidelines for more details.	Case
11	Seasonal Product (not available)	Definition – Identifies whether a seasonable product is not currently available. Normally specified on the Vendor Selling Unit. SN = Seasonal product currently not available.	Case
12	Seasonal Product (available)	Definition – Identifies whether a seasonable product is currently available. Normally specified on the Vendor Selling Unit. SY = Seasonal product currently available.	Case
13	Trade Name – English & French (V2) (Brand)	Definition – The Vendor's Trade Name (i.e. "Short" Brand Name). E.g. Nescafe ("Nescafe Frothy" would be considered a long brand).	Case & Item
14	Short Description – English & French	Definition – A non-structured and abbreviated yet readable short description for the product. The description should not include Pack, Size or UOM. Mixed cases may be used. For French - Accented characters are NOT to be used.	Case & Item
15	Extended Description – English & French	Definition – A structured and non-abbreviated description of the product. Mixed cases may be used. Note – While this field is up to 80 characters, most retailer legacy systems are not capable of long descriptions. Vendors should not design their descriptions to build to the largest value. Retailer systems in general cannot accommodate extended descriptions of 80 characters. If vendors can provide a good description of the item within 40 characters that may address a larger percentage of their retailers. Example: Case – ABC Red Delicious Bagged Apples 5lb x 12	Case & Item
16	ECCC Interim Class Code	Definition – The ECCC Interim Merchandising Classification Code is a six-digit code which identifies the type of merchandise. The Classification Code is an interim solution until the Global UCC/EAN Classification system is available.	Case & Item
17	IFDA Classification (Only FS- Foodservice)	Definition – International Foodservice Distributors Association (IFDA) class (first level) and category classification (second level) – formatted as a 5-digit plus 5-digit number.	Case
18	Billed Dimensions (Catchweight Min/Max)	Definition – The invoicing unit of measure. Enter "1" in the quantity field and specify the desired unit of measure. For Catch weight items only (i.e. items priced by weight, yet sold as if fixed weight) enter the min/max weight of the item	Case
19	Storage Temperature	Definition – The normal average temperature that the item is to be stored. For items requiring refrigeration specify 0o C. For items requiring a freezer specify -18o	Case
20	Manufacturer Name/Address/DUNS+4 / GLN (Global Location Number)	Definition – A coded identification of the Manufacturer/Supplier Type Codes example 1 = D-U-N-S Number – Dun & Bradstreet 8 = UCC COMMID 9 = D-U-N-S+4 - Dun & Bradstreet plus 4-character suffix 12 = 1 concatenated with phone number 21 = Health Industry Number (HIN) UL = Global Location Number (GLN)	Case
21	Manufacturer/Broker Invoice Indicator	Definition – A coded identification of the Manufacturer/Supplier.	Case
22	Ship From	Definition – The name of the ship from location. Provide the Ship From Name & Address if there is only one Ship From location.	Case

ECCnet - Perishable Attributes		ECCnet - Perishable Attribute Definition	Packaging Level
23	Special Handling Code	Definition – To specify special transportation handling instructions. Only one is allowed, supply most relevant. DA= Dangerous Goods, DNF = Do Not Freeze, EL = Environmental Control Limits, FL = Flammable, FR = Fragile Handle with Care, HM = Endorsed as Hazardous Materials, IC = Ice, MRF = Refrigerated, OTC = Temperature Control, PG = Poisonous Gas	Case
24	Gross Weight	Definition – The weight of the item. The gross weight includes all packaging materials of the product.	Case
25	Net Weight	Definition - Actual Net Weight - Net weight includes the contents of the product, but excludes any packaging materials.	
26	Dimensions - Height, Width, Depth	Height Definition – Vertical dimension of the object measured when the object is in the upright position. Width Definition – Shorter measurement of the two horizontal dimensions measured with the object in the upright position. Depth Definition – Largest horizontal dimension of an object measured when the object is in the upright position. All are to be specified in Metric with up to 2 decimal places. Centimeter is suggested unless the value is too small or too large.	Case & Item
27	Volume (Cube)	Definition – The cube of the item. Specify in Metric with up to 3 decimal places. Cubic Meters is suggested unless the value is too small or too large. If specified the value must be greater than zero. ECCnet maintains this field with up to 5 integer positions and 3 decimal positions.	Case
28	Number of consumer units per inner & inners	Definition – The number of inner containers, or number of eaches if there are no inner containers, for the current level of packaging.	Case
29	Unmarked Inner – Height, Width, Depth and number of consumer units per inner	Number of Units in Inner Pack Definition – The quantity of consumer units contained in the inner pack. If specified must be greater than zero. Length (Item Depth) Definition – Largest horizontal dimension of an object measured when the object is in the upright position. Width Definition – Shorter measurement of the two horizontal dimensions measured with the object in the upright position. Height Definition – Vertical dimension of the object measured when the object is in the upright position. For Length, width and height specify in Metric with up to 2 decimal places. If specified must be greater than zero. Centimeters is suggested unless the value is too small or too large.	Case
30	Origin of Product Country/Province	Country of Origin Definition – The country of origin of the item. If the product is manufactured in more than one country leave blank or enter the most likely country. Definition – The province or state of origin of the item. Only required for fresh produce – e.g. Ontario Tomatoes. If outside of North America, province is not necessary.	Case & Item
31	Flavour – English & French	Definition – For Food products, the flavour of the product	Item
32	Ingredients – English & French	Definition – For Food products the ingredients list as shown on the product packaging to comply with Canadian legislation and regulations. Ingredients should be transmitted in both English and French. Ingredients are only mandatory for items requiring in-store labeling. Example: Carbonated Water: Sugar/Glucose-Fructose, Carmel Colour, Sodium Benzdate, Natural and Artificial Flavours, Critic Acid, Caffeine.	Item
33	Weight Scale Description – English & French	Weight Scale Descriptions English Definition – For Produce and Fresh Meat variable weight items a description to appear on the weight scale generated label. Formatted as two lines of up to 26 characters. When using EDI two occurrences of the PID segment are used. The description should be transmitted in both English and French. For further information on weight scale labels please see the following source: http://www.inspection.gc.ca . Examples: BLACK FOREST HAM ACME COOKED CURED BNLS ACME 17% PROTEIN TRKY RST 0.4GR F. PER 60G French Definition – Same as above in French. Accented characters are NOT to be used.	Item
34	Special Packaging Codes	Type of Packaging (Special Packaging Code) Definition – Identifies the specific packaging for perishable products (Fresh produce and fresh meat). Mandatory for perishable products for certain Retailers – consult your Retailers. This field should be used to specify the “code” (i.e. not the description). Eg. “70” - #25D Size Tray for Ground Beef	Item
35	Must Sell by Days	Definition - Used to designate the number of days open dated product must 'sell by' from date of manufacture.	Item
36	Tare Weight	Tare Weight – The weight of the container. Canadian legal and regulatory requirements have specific precision requirements. Mandatory for products sold by weight at point-of-sale (e.g. Produce, Dairy (Cheese) and Fresh Meat items).	Item
37	Packaging Code - Form and Material	Packaging Form Definition – A code identifying the form of the packaging material. Packaging Material Definition – A code identifying the type of packaging material.	Item
